

Bright Coffee Shop

Sales Analysis & Growth Recommendations

PRESENTED BY: MUSUAMBA TERESA WA BAYA

Agenda

01

The Scenario

Why the CEO needs this analysis

02

About the Dataset

Six months of transactions, three stores

03

Product Performance

What's selling — and what isn't

04

Where We Sell

Comparing the three locations

05

When We Sell

Peak hours, days & months

06

Customer Behaviour

Basket size & buying patterns

07

Insights & Recommendations

What the CEO should do next

08

Next Steps

Turning analysis into action

The Scenario

Bright Coffee Shop has a new CEO, and a clear mandate: grow revenue and sharpen product performance across the business.

As a Data Analyst, my role is to turn six months of raw transaction data into the evidence the CEO needs to make confident decisions.

This analysis sets out to answer:

- Which products generate the most revenue?
- What time of day does the store perform best?
- How do sales trend across products and time intervals?
- What should change to improve sales performance?

About the Dataset

The analysis is built on Bright Coffee Shop's daily transactional sales log — one row per item sold, across every till, every store, for a full six-month trading period.

149,116

TRANSACTIONS

214,470

UNITS SOLD

3

STORE LOCATIONS

9

PRODUCT CATEGORIES

6

MONTHS OF SALES

Key fields captured

- transaction_date & transaction_time
- store_location & store_id
- product_category, product_type, product_detail
- unit_price & transaction_qty

Stores covered

- 📍 Lower Manhattan
- 📍 Hell's Kitchen
- 📍 Astoria

All three stores trade under one consistent menu and pricing structure.

Revenue by Product Category

Reading the chart

- Coffee leads with R269,952 — 38.6% of all revenue.
- Tea is a strong second at R196,406 (28.1%) — together Coffee and Tea drive two-thirds of the business.
- Bakery (R82,316) and Drinking Chocolate (R72,416) are solid secondary categories worth cross-selling alongside drinks.
- Branded goods, Loose Tea, Flavours and Packaged Chocolate each contribute under 2% . These are niche add-ons rather than core revenue drivers.

Top 10 Product Types by Revenue

Why this matters

- Barista Espresso (R91,406) is the single best-selling product type in the entire menu.
- Three of the top four spots are split across Tea, Coffee and Chocolate — variety, not one product, is driving revenue.
- Scone is the only Bakery item to on the top 10, hinting at room to grow other bakery lines.

Best-Sellers vs Underperformers

Looking at individual product details, the gap between the top and bottom performers is striking.

TOP 5 · Best-Sellers by Revenue

BOTTOM 5 · Underperformers by Revenue

The best-seller (R21,152) earns 28× more than the weakest product (R755) — a strong case for bundling or retiring the latter.

WHERE WE SELL

Revenue by Store Location

■ Hell's Kitchen ■ Astoria ■ Lower Manhattan

Hell's Kitchen

R236,511.17

33.84% of revenue

Astoria

R232,243.91

33.23% of revenue

Lower Manhattan

R230,057.25

32.92% of revenue

Revenue is almost perfectly split three ways — within 1.6 percentage points of each other. No single store is underperforming when compared to others.

Sales Performance by Time of Day

Reading the pattern

- Mid-Morning (9–11am) is the single best-performing window, ahead of even the traditional rush hour.
- Revenue climbs steadily from 6am, peaks around 10am (R88,673), then steps down through the day.
- Evening and Night combined contribute just 21% of revenue — the clearest opportunity for promotions.

Weekday vs Weekend Performance

WEEKDAY

R503,588

72.06% of revenue · 5 trading days

R100,718 / day

WEEKEND

R195,225

27.94% of revenue · 2 trading days

R97,612 / day

Once normalised per day, weekday and weekend performance are almost identical (R100,718 vs R97,612) — demand is steady across the whole week, but is highest on Mondays and Fridays.

WHEN WE SELL · 3 OF 3

Monthly Revenue Trend

↑ **+104%**

Revenue growth, Jan → Jun

- Revenue more than doubled across the period — from R81,678 in January to R166,486 in June.
- A dip in February is followed by uninterrupted month-on-month growth from March onward.
- If the trend holds, the second half of the year should outperform the first comfortably.

Basket Size & Purchase Behaviour

Items per transaction

Revenue by basket value

The opportunity

Nearly 6 in 10 transactions (58.4%) involve just a single item, and the R3–R5 band alone accounts for over a third of total revenue. Encouraging customers to add a second item — a pastry with their coffee, for example — is one of the most direct levers available to lift average transaction value above the current R4.69.

Spend Segments: Where They Shop & What They Buy

LOW SPENDER

149,101 transactions

R4.66

avg per transaction

Shops at all 3 stores · Buys coffee, tea & bakery

MEDIUM SPENDER

5 transactions

R65.60

avg per transaction

Only at Lower Manhattan · Only Branded merch

ULTRA SPENDER

10 transactions

R360

avg per transaction

Only at Hell's Kitchen · Only Coffee Beans (bulk)

WHERE THEY SHOP

% of each segment's transactions per store location

WHAT THEY BUY

% of each segment's revenue by product category

Ultra Spenders visit Hell's Kitchen exclusively to buy bulk Coffee Beans (R360/purchase). Medium Spenders head to Lower Manhattan for Branded merchandise. Every other customer is a Low Spender, and approximately all low spenders are equally distributed between all three stores

Key Insights Summary

Two categories, two-thirds of revenue

Coffee (38.6%) and Tea (28.1%) together generate 66.7% of revenue — protecting these two categories is non-negotiable.

Mid-Morning beats Rush Hour

The 9–11am window (R220,162) outsells the traditional 6–8am rush by nearly R52,000 — the real peak is later than expected.

Stores are evenly matched

All three locations sit within 1.6 percentage points of a perfect third-share — no site is under- or over-performing.

Six months of unbroken growth

Revenue more than doubled from R81,678 in January to R166,486 in June — a +104% trajectory that shows no sign of slowing.

Single-item baskets are the norm

58.4% of transactions contain just one item. Lifting even half of those to two items would meaningfully raise the R4.66 average.

One product carries outsized weight

Barista Espresso (R91,406) alone out-earns the entire bottom 15 product types combined — protect it at all costs.

Spend Segments are hyper-concentrated

Ultra Spenders exist only at Hell's kitchen, buying bulk coffee beans. Medium Spenders exist only at Lower Manhattan, buying branded goods. Low spenders are majority and they spend across all three locations.

Recommendations for the CEO

Activate the slow hours

Run after-work bundles or happy-hour pricing between 4–8pm — currently just 21% of daily revenue. A targeted promotion in this window is the fastest lever to lift daily revenue without touching the morning peak.

Protect and expand the top four

Barista Espresso, Brewed Chai Tea, Hot Chocolate and Gourmet Brewed Coffee drive the bulk of revenue. Prioritise their stock, staff training and visibility on the menu board at all three stores.

Rescue or retire the tail

Bundle Earl Grey, Lemon Grass and small Dark Chocolate with bestsellers, or feature them in a limited seasonal special. If velocity doesn't improve within 90 days, consider delisting to simplify the menu.

Build a second-item habit

58.4% of transactions are single items. Train staff to suggest one complementary add-on at every till — a scone with an espresso, or a flavour shot with a tea. Even a 10% conversion rate lifts average basket materially.

Nurture your Ultra Spenders at Hell's Kitchen

Ten Ultra Spender transactions averaging R360 are already happening exclusively at Hell's Kitchen. A private, invite-only premium bean subscription or tasting event could formalise and grow this high-value niche. Do not overstock on coffee beans at the other two locations, as they do not receive any sales

Leverage Lower Manhattan for Branded sales

All Medium Spender purchases (Branded merchandise, avg R65.60) happen only at Lower Manhattan. That store is the natural home for a merch display expansion — gift sets, branded travel cups, seasonal bundles.

Next Steps

Immediate (0–30 days)

Automate daily reporting

Schedule the Databricks pipeline to refresh all sales dashboards overnight — no more manual exports.

Launch a slow-hour campaign

Design and deploy an after-work bundle (4–8pm) at all three stores to target the lowest-revenue window.

Introduce upsell prompts

Brief front-of-house staff on a consistent second-item suggestion script at the till.

Short-term (1–3 months)

Audit the tail

Formally review the bottom 10 product lines. Bundle, promote, or discontinue based on 90-day velocity.

Formalise Ultra Spender access

Pilot a premium Coffee Bean subscription or tasting event at Hell's Kitchen for high-value repeat buyers.

Expand Branded at Lower Manhattan

Dedicate dedicated shelf/display space to Branded merchandise at the only store where Medium Spenders shop.

Strategic (3–12 months)

Track multi-location performance

Extend the analytics model to every future store from day one — scalable reporting from the start.

Launch a loyalty programme

Target rewards at the Mid-Morning window (9–11am) — the highest-value slot — to convert regulars into advocates.

Seasonal product strategy

Use monthly revenue trend data to design seasonal launches timed to match the observed growth curve (Mar–Jun peak).

Thank You
